

ANA, S.A. is responsible for a set of airport infrastructures of vital importance to the national economy and to the local economies surrounding its airports.

Aware of the social responsibilities that fall on economic players in general, ANA, S.A. is committed to minimizing the impacts resulting from the natural growth of its business on the environment and on the communities surrounding its airports. ANA, S.A. is also aware that these issues differ depending on the characteristics, traffic and location of each airport.

ANA, S.A. considers itself responsible for adopting and dissemination clear guidelines for the future and raising environmental awareness among all airports operators, users and staff.

The company is committed to monitoring, controlling and reducing the impact of its activities on local communities and on the environment in general, making every effort to ensure a responsible attitude in this and other matters. The company's environmental policy aims to respect the principles of sustainable development and seeks to balance environmental, social and financial concerns.

1. Systematically apply sustainable development principles when planning, designing, building, operating and deactivating facilities, systems and services;
2. Lead change with staff and partners in order to obtain environmental improvements, through concerted action and effective communication of its policy and goals in this area;
3. Develop management systems in this matter and involve all staff to ensure that environmental factors are included and considered in the analysis leading to decision making;
4. Establish an open and responsible dialogue with the surrounding communities and others affected by the environmental impact of its activities, seeking and discussing solutions that take into account the feasibility and socio-economic equilibrium of aforementioned activities;
5. Continually improve the company's Integrated Management System environmental, in order to improve the environmental performance as a whole, through benchmarking, ambitious goals, annual audits, results analysis and financial resource allocation;
6. Ensure compliance with environmental legislation as a goal and minimum requirement.

Priorities, adapted to each airport location, aim toward:

_Energy efficiency, monitoring and reducing emissions of greenhouse gases;

_Monitoring and minimizing water consumption;

_Controlling potentially polluting emissions to air, soil and water resources;

_Fostering the reduction, reuse and recycling of waste;

_Managing noise;

_Preserving biodiversity.

Priorities and goals are regularly reviewed and updated, based on progress and results.
